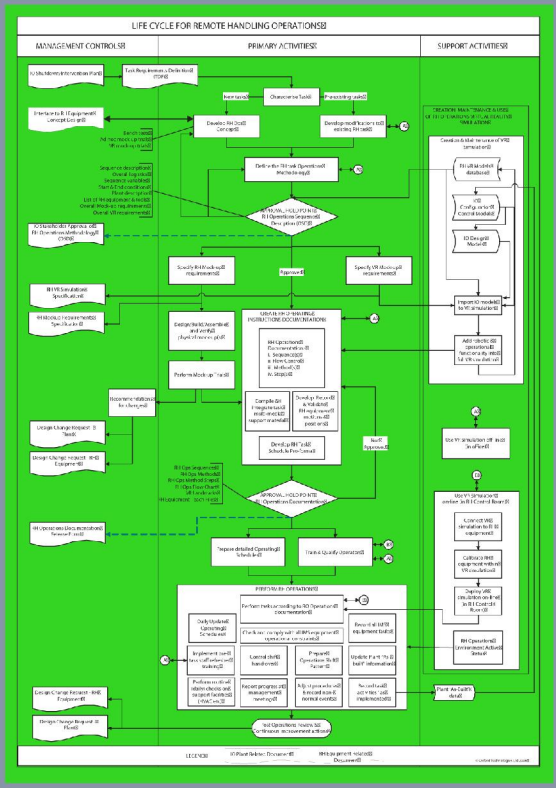
OXFORD TECHNOLOGIES®

Project:

Development of the ITER Maintenance Management System (IMMS)

Client:

ITER Organisation, France



Organisation & Management:

Oxford Technologies Ltd was sole contractor and utilised 4 professional staff on this 6 month project.

Aim:

The project concerns the management of preparations and implementation of ITER remote maintenance.

Implementation:

The IMMS was delivered as a single document defining the following aspects:-

> Influence of maintenance on the ITER programme
> ITER baseline maintenance strategy
> Remote Handling Classifications
> Life cycle for Remote Handling compatible ITER plant
> Life cycle for the ITER Maintenance System
> Life cycle for preparation and implementation of Remote Operations
