

Project:

Peer Review of the Dounreay Shaft Platform Design & HAZOP analysis

Client:

UKAEA, Dounreay

Organisation & Management:

Oxford Technologies Ltd supplied the services of one member of staff for this project.

Aim:

The aim was to provide an independent expert review of the design proposed for remote handling operations within the Dounreay shaft & to participate in the associated HAZOP analysis.

Implementation:

The peer review was implemented in stages:-

- > Gather documentary information from UKAEA
- > Assimilate existing Development & Requirements documents and other input data
- > Define & agree working criteria for peer review
- > Assess design against review criteria
- > Present a draft assessment of input data
- > Conduct systematic review of the findings with client
- > Revise and Finalise report

The HAZOP analysis was implemented by participation of our expert in the HAZOP meeting held at client site.
